OBJECTIVE

Second-year B.S. Computer Science student (4.0 GPA) at UT Dallas with full stack production experience (React/Node/Firebase) serving 900+ users, seeking software engineering or ML/cloud internship. Strong interest in AI technologies, distributed systems, and building production grade applications that integrate machine learning with scalable cloud infrastructure.

EDUCATION

The University of Texas at Dallas

May 2027

Bachelor of Science, Computer Science

GPA: 4.0

- **Honors:** Dean's List (Fall 2024, Spring 2025, Fall 2025), Academic Excellence Scholarship
- **Relevant Coursework:** Probability & Statistics for Computer Science, Linear Algebra, Advanced Algorithm Design & Analysis, Systems Programming in UNIX (C), Computer Architecture (MIPS Assembly), Software Engineering, Data Structures & Algorithms (Java), Discrete Mathematics

EXPERIENCE

Software Developer | Artificial Intelligence Society (AIS), UT Dallas

September 2025-Present

- Led end-to-end design and implementation of the [HackAI](#) platform (927 applicants, 350 participants) and *AI Mentorship* pages (500+ participants)
- Built dynamic, data-driven frontend in **React + TypeScript** fully integrated with **Firebase Firestore**, enabling real-time rendering and role-based access for applicants, participants, and judges
- Engineered **Node.js** scripts to migrate and normalize 927 application records from **Coda** to **Firebase** while ensuring data integrity and schema consistency
- Automated secure generation of unique access codes and implemented authentication and access-control workflows for all program participants
- Collaborated as a primary contributor on a 6-developer team through **Git**-based workflows maintain and scale production systems serving 400+ active AIS members iteratively

Front-End Developer | Comet Connect, Society of Women Engineers (SWE), UT Dallas

September 2024-May 2025

- Designed and implemented mobile UI/UX for a campus networking application using **React Native**
- Built **Firebase authentication** workflows including secure user login and protected data routing
- Developed real-time messaging and user filtering features to improve user engagement and retention
- Presented system architecture and implementation strategy to industry engineers

PROJECTS

Student Marks Prediction | Python, Pandas, NumPy, Scikit-learn

March 2026-Present

- Developing a Student Marks Prediction system using Linear Regression to estimate scores based on attendance & study time
- Performing data preprocessing including handling missing values and feature scaling
- Implementing train-test split and evaluating model using MAE and R^2 score
- Aspire to achieve accurate performance with low prediction error on test data

Concurrent Client-Server Messaging System | C, Linux, Threads, Processes, Sockets

Fall 2025

- Implemented TCP multi-client messaging server in **C** using POSIX sockets and concurrent process management
- Designed client connection handling with multiplexed I/O
- Ensured thread-safe message broadcasting across active clients

Browser Navigation Engine | Java

Fall 2025

- Designed dual-stack-based browser history model support forward/back navigation analyzing time/space tradeoffs of core operations in **Java**
- Incorporated state saving across sessions/runs and transition logic to invalidate forward history on new navigation

Anthropic Katha

June 2023-August 2023

- Built multimedia education platform explaining particle physics concepts through animation and storytelling
- Produced educational content reaching 300+ global users within two months
- Designed learning flow to simplify high-complexity STEM concepts for beginner audiences

TECHNICAL SKILLS

Languages: Python, Java, C/C++, JavaScript/TypeScript

Frontend: React, React Native, HTML, CSS/TailwindCSS

Backend & Cloud: Node.js, Next.js, Flask, Firebase (Firestore, Authentication, Admin SDK) Google Cloud Platform

Tools & Systems: Git/GitHub, Linux, Socket Programming, Multithreading/Concurrency, Figma

ML/Data: Pandas, NumPy, Scikit-learn
